

Computer and Data Security

Continuous Assessment – Group Project

Out: Thursday, 07 May, 2026 (Week #10)

Due: Thursday, 18 June, 2026 (Week #16)

Weight: 60% of the overall assessment

This assignment is designed as a group project for one of the important components of continuous assessment. Please read the following guideline carefully and act accordingly.

Team formation and management: You are encouraged to work in a group. In general, the number of group members is 4, which should be reasonable for you to share the workload and coordinate among the group members. If you would like to work in a big group of more than 4 members for a project at large scale, please discuss with the course instructor about your work plan before you start the project. If you prefer to work by yourself due to some special reasons, it is also okay. Please inform the course lecturer and TA in advance for the adjustment of your workload.

Assessment scheme: The assessment for every classmate will be fair and consistent in terms of the quality of your work, which can be evaluated by the content and quality of your written report, demo system, oral presentation and presentation slides. More specifically, the assessment of this assignment will include the following issues:

- Literature survey (*background information about the proposed project*) (10%)
- Description of the proposed project (*objectives, significance, relevant technologies*) (10%)
- Development of the project (*design, implementation, testing and demonstration*) (20%)
- Quality of written report (*style, content, conclusions, written statements*) (10%)
- Quality of oral presentation (*ppt slides, content and style of presentation*) (10%)

Project topic: The topic of your project should be relevant to the subject issues of computer security and data security. You are encouraged to propose a topic of your own and develop a demo system by yourselves in a team. The following is a list of the suggested project topics. You may choose one of them for your project. You are strongly encouraged to propose your own topic based on your interest and strength.

~~~~~  
**Topic 1:** Online ordering system

~~~~~  
Topic 2: Smart Chatbot

~~~~~  
**Topic 3:** Inventory control management

~~~~~  
Topic 4: Image processing and computer vision applications

~~~~~  
**Topic 5:** Library management system

~~~~~  
Topic 6: Student Database Management

~~~~~  
**Topic 7:** Personal identification by biometrics computing

~~~~~  
Topic 8: Smart healthcare system

~~~~~  
**Topic 9:** Smart job search system

~~~~~  
Topic 10: Smart museum system
